

New Age Blast Media **Fine** and **Ultra** compete against *SODA* for
Auto Restoration!!

Dodge Coronet Side Fender **BEFORE**

Dodge Coronet Side Fender **AFTER**

New Age Blast Media is now has been certified for use by:

CHOPTANK SODA BLASTING

Preston, Maryland

www.choptanksodablasting.com

Choptank needed to find a blasting medial that could provide enhanced performance vs. soda on delicate parts like antique cars. Their recent work for customers have validated that **New Age Blast Media**'s field performance can:

- ** Remove **RUST** on the metal unlike lighter media such as soda
- ** Provides for fine profile which negates the need for sanding. Major savings on part preparation on time and materials vs. the use of non profiling agents like soda.
- ** Prevent the need to wash and surface with vinegar solutions after blasting to prep surface for coating. Glass is non toxic and inert with stable ph levels.
- ** Using 50 psi at the nozzle, Choptank reports no sparking or warping of metal during Blasting.
- ** Ask about our **Fine (70-100mesh)** and **Ultra (100-)** as a cost effective way to blasting on fine or delicate substrates.
